No. 105, Guangzhong Road, Minhang District,
Shanghai, China

The following test item(s) was/were performed on submitted sample(s) and/or component(s) confirmed by applicant

Remark :

(1) The chemical analysis of specified SVHC is performed by means of currently available analytical techniques against the following SVHC related documents published by ECHA:
(A) http://echa.europa.eu/chem_data/authorisation_process/candidate_list_table_en.asp
(B) http://echa.europa.eu/consultations/authorisation/svhc/svhc_cons_en.asp
(C) http://echa.europa.eu/chem_data/reg_int_tables/reg_int_curr_int_en.asp#current_svhc
These lists are under evaluation by ECHA and may subject to change in the future.

(2) In accordance with Regulation (EC) No 1907/2006, any EU producer or importer of articles shall notify ECHA, in accordance with paragraph 4 of Article 7, if a substance meets the criteria in Article 57 and is identified in accordance with Article 59(1) of the Regulation, if (a) the substance in the Candidate List is present in those articles in quantities totaling over one tonne per producer or importer per year; and (b) the substance in the Candidate List is present in those articles above a concentration of 0.1% weight by weight (w/w).

(3) From 28 October 2008, EU & EEA suppliers of articles which contain substances on the Candidate List in a concentration above 0.1% (w/w) must provide sufficient information, available to them, to their customers and on request to a consumer within 45 days of the receipt of this request. This information must ensure safe use of the article and, as a minimum, include the name of the substance.

(4) If a SVHC is found over the reporting limit, client is suggested to identify the component which contains the SVHC and the exact concentration of the SVHC by requesting further quantitative analysis from the laboratory.

TEST RESULT

No.	Substance Name	CAS No.	MDL (%)	Concentration (%)
				Group A
-	All tested SVHC	-	0.01	ND

Remark

1) ND = not detected, less than MDL
2) MDL= Method Detection Limit;
3) Tests are performed in mixed components.
4) The table above only shows detected SVHC, and SVHC that below MDL are not reported. Please refer to Appendix for the full list of tested SVHC.
5) The results represent the worst case scenario of SVHC concentration in the tested components, which are calculated with the number of components in the composition test and the determined concentration. Confirmation test of individual component is recommended in case the threshold 0.1% is exceeded.
6) The test results are based on the calculation of selected element(s) / marker(s) and to the worst-case scenarios. Further confirmation and quantitative analysis are recommended to determine the SVHC sources.
7) * The substances are tested in terms of its respective elements (e.g. Co, As, Pb, Cd, Cr(VI) and B) and calculated based on the assumption of worst case scenarios.
8) ** Concentration of bis(tributyltin)oxide, TBTO is reported as tributyltin, TBT. The result is a screening test of TBTO and can cover TBTO and other salts under current technologies. Further investigation is needed to have the exact amount of TBTO; Concentration of Dibutylbis(pentane-2,4-dionato-O,O')tin is reported as Dibutyltin, DBT. The result is a screening test of Dibutylbis(pentane-2,4-dionato-O,O')tin and can cover Dibutylbis(pentane-2,4-dionato-O,O')tin and other salts under current technologies. Further investigation is needed to have the exact amount of Dibutylbis(pentane-2,4-dionato-O,O')tin
9) *** Calculated concentration of Aluminosilicate Refractory Ceramic Fibres and Zirconia Aluminosilicate Refractory Ceremic Fibres is based on the identified elements result and confirmation by microscope.
10) ****The substance does only fulfil the criteria of REACH Art. 57 (a) if it contains Michler's ketone (CAS Number: 90-94-8) or Michler's base (CAS Number: 101-61-1) in a concentration ≥ 0.1% (weight / weight).
